

Always Make a Great Entrance

CCM705 with CCM3305SL sidelites and ASET transom - Ashurst™ glass

... With Therma-Tru® Fiberglass Doors

Therma-Tru® uses fiberglass because we believe it allows us to create the best possible door systems. A fiberglass door offers plenty of strength, made from a material that won't dent or rust like a steel door, or warp, split, crack or rot like wood. It's perfectly suited to provide homes with weather resistance and security, without ever losing its curb appeal. And our solid foam core offers as much as four times the insulation value of most wood doors.* Available in deep wood grains or smooth, paintable surfaces. All the details and feel of real wood with all the advantages of fiberglass.

*Comparison of fiberglass to wood doors (both without glass)
