Therma-Tru Doors earns Green GOOD DESIGN® Award for its energy-efficient options for every home

[MAUMEE, OHIO, May 29, 2025] In recognition of a commitment to providing sustainable design innovation for homes across the U.S., Therma-Tru® Doors has been named a 2025 Green GOOD DESIGN® award-winner.

Presented annually by The European Centre for Architecture Art Design and Urban Studies and The Chicago Athenaeum Museum of Architecture and Design, the Green GOOD DESIGN award program, “identifies and emphasizes the world’s most important examples of sustainable design.”

Nearly all—99.8%—of Therma-Tru products are NFRC-certified, helping homeowners make informed decisions on buying products that save on energy costs. NFRC-certified products are independently tested by the National Fenestration Rating Council (NFRC) for energy performance across key categories.

“Because Therma-Tru doors are qualified to help keep heating and cooling sealed inside the home, the products also deliver energy savings straight to homeowners’ pockets,” said Eric Dotson, vice president of product management B2B.

Some of the features that help Therma-Tru doors stand out in energy efficiency include:

- **Pressure-injected foam core:** Therma-Tru’s fiberglass doors feature a pressure-injected foam interior, providing four-times the insulation of a wood door, helping enhance a home’s energy efficiency.
- **Flush-glazed glass:** Intentional design for exceptional performance—sleek frameless flush-glazed glass provides increased protection against air and water infiltration.
- **Complete door systems:** Therma-Tru doors and glass are engineered to work together with components like weatherstrips that help create a tighter seal and reduce air leakage around the edges.

Therma-Tru's energy-efficient doors also provide points toward the U.S. Green Building Council (USGBC) Leadership in Energy and Environmental Design (LEED) certification, supporting green building goals.

Therma-Tru is America's leading manufacturer of fiberglass and steel exterior door systems. Proven to perform, protect and preserve, a Therma-Tru complete door system is the culmination of more than 60 years of expertise in material science, engineering and manufacturing. The company tests its on-trend entryways against extreme environmental conditions—far beyond industry standards—to ensure maximum durability and safety. Learn more at thermatru.com/complete-system.
